Intervacc AB and Dechra Pharmaceuticals PLC enter into an Agreement to Commercialize Strangvac® in Europe

Stockholm, April 12, 2021 - Intervacc AB ("Intervacc") announced today that they have entered into an exclusive distribution agreement with Dechra Pharmaceuticals PLC, ("Dechra") to commercialize Intervacc's leading vaccine candidate Strangvac® in Europe, excluding the Nordic and Baltic countries where Intervacc will market and sell Strangvac® directly. Strangvac® is in late-stage regulatory review with the European Medicines Agency and is an innovative vaccine against equine strangles, a highly contagious infectious disease that affects horses globally.

The distribution agreement is based on Dechra purchasing finished products from Intervacc at an agreed transfer price plus additional future payments to Intervacc linked to pre-defined sales milestones. The agreement will run for a period of five years and Intervacc will remain the Market Authorization holder for Strangvac® in Europe.

"We are excited to be entering into this partnership with Dechra to expand Strangvac®'s market reach in Europe, where there is a significant medical need to prevent this highly contagious, debilitating disease. We selected Dechra as our exclusive partner as they are a high growth, global specialist veterinary business with a particular strength in the equine market. We look forward to working in close collaboration with Dechra to bring the innovative approach of Strangvac®, which has shown great promise in clinical trials, to the European equine community as rapidly as possible." said Andreas Andersson, CEO of Intervacc AB.

Ian Page, Chief Executive Officer of Dechra commented: *"We are delighted to enter this collaboration with Intervacc. The addition of Strangvac® will further strengthen our established European equine range by providing veterinarians with a novel product helping to prevent strangles in horses."*

Strangvac® is a modern vaccine against strangles, a highly contagious and serious infection in horses caused by the bacterium *Streptococcus equi*. Strangvac®, which consists of soluble recombinant proteins, is injected intramuscularly and is totally devoid of any living infectious agent. This results in a vaccine with an excellent safety profile. Strangvac® is the first of what Intervacc expects to be a series of unique vaccine products for the animal health industry.

Intervacc is currently working with the European Medical Agency seeking approval for Strangvac® in Europe and is forecasting approval in the second quarter of 2021.
